Conjugation

Applications

Immunogen

Form/Appearance

Concentration

Goat

Human

CCL26

Lyophilized

batch dependent

repeated freeze-thaw cycles.

For research use only

Polyclonal

**Q9Y258** 

**Q9Y258** 

Unconjugated

ELISA, NeA, WB

Produced from sera of goats pre-immunized with highly

Eotaxin-3 antibody is stable for at least 2 years from date of receipt at -20°C. The reconstituted antibody is stable for at least two weeks at 2-8°C. Frozen aliquots are stable

for at least 6 months when stored at -20°C. Avoid

Neutralization: To yield one-half maximal inhibition [ND50] of the biological activity of human eotaxin-3

direct ELISA (using 100 µL/well antibody solution) a

required. This antigen affinity purified antibody, in conjunction with compatible secondary reagents, allows the detection of 0.2 - 0.4 ng/well of recombinant human eotaxin-3. Sandwich: To detect hEotaxin-3 by sandwich

ELISA (using 100 µL/well antibody solution) a concentration of 0.5 - 2.0 µg/mL of this antibody is required. This antigen affinity purified antibody, in

concentration of at least 0.5 µg/mL of this antibody is

(100.00 ng/mL), a concentration of 5.0 - 7.0  $\mu$ g/mL of this

antibody is required. ELISA: To detect human eotaxin-3 by

conjunction with our Biotinylated Anti-Human Eotaxin-3as a detection antibody, allows the detection of at least 0.2 -0.4 ng/well of recombinant hEotaxin-3.Western Blot:To detect human eotaxin-3 by Western Blot analysis this antibody can be used at a concentration of 0.1 - 0.2 µg/mL. Used in conjunction with compatible secondary reagents the detection limit for recombinant human eotaxin-3 is 1.5 - 3.0 ng/lane, under either reducing or

pure (>98%) recombinant human Eotaxin-3.
