Application notes

BAFF antibody detects endogenous protein by Flow Cytometry. Method: 293T cells (5 x 10⁵) expressing surface BAFF vector or Mock transfected, were incubated on ice for 30 min in 50 µl FACS buffer (PBS, 5% fetal calf serum, 0.02% azide) containing 4 µg/mL of Buffy-1 antibody. After washing in FACS buffer, FITC-conjugated antibody to rat IgG was added and cells were analyzed by flow cytometry.
