immunoglobul...

Conjugation APC

Tested FC

Applications

Immunogen KLH-coupled trinitrophenol

Preservatives Stabilizing phosphate buffered saline (PBS), pH 7.4, 15

mM sodium azide

Concentration 0.1 mg/ml

Storage Store at 2-8°C. Protect from prolonged exposure to

light. Do not freeze.

Note For research use only

Application notes Negative control: The reagent is intended as an isotype

control to establish the amount of non-specific antibody binding. For your particular experiment, use the same concentration of this control antibody as the recommended working concentration of the antigen-specific antibody. Also, when working with prediluted antibodies, dilute the isotype control to the same concentration as is the concentration of the antigen-specific antibody in the prediluted antibody solution you are using. If under particular experimental

conditions the background signal of the isotype control is too high (usually when working concentrations of used antibodies are above 10 μ g/ml of incubation mixture), change the conditions of your experiment to

reduce the background.

Isotype Mouse IgG2b kappa

Clonality Monoclonal

Purity Purified antibody is conjugated with activated

allophycocyanin (APC) under optimum conditions and unconjugated antibody and free fluorochrome are removed by size-exclusion chromatography.

Dilution Range Negative control: The reagent is intended as an isotype

control to establish the amount of non-specific antibody binding. For your particular experiment, use the same concentration of this control antibody as the recommended working concentration of the antigen-specific antibody. Also, when working with prediluted antibodies, dilute the isotype control to the same concentration as is the concentration of the antigen-specific antibody in the prediluted antibody solution
