| <b>Description</b>         | Chicken CNTF/Ciliary neurotrophic factor ELISA Kit                                                                                                                                                                                                               |
| <b>Reactivity</b>          | Gallus                                                                                                                                                                                                                                                           |
| <b>Tested Applications</b> | ELISA                                                                                                                                                                                                                                                            |
| <b>Note</b>                | For research use only                                                                                                                                                                                                                                            |
| <b>Application notes</b>   | Detect Range: 31.2-2000 pg/mL.<br>Sensitivity: 15.6 pg/mL. Assay Type: Sandwich. Assay Time: 3-5 h.<br>Detection wavelength: 450 nm.<br>Gene_full_name: CNTF. Sample Volume: 100 µL. Sample Type: Serum, plasma, tissue homogenates and other biological fluids. |
| <b>Expiration Date</b>     | Please enquire.                                                                                                                                                                                                                                                  |
