

Product Datasheet

Human CHGA(Chromogranin A) ELISA Kit (orb1807617)

Description Human CHGA(Chromogranin A) ELISA Kit

Reactivity Human

Range 62.5-4000 pg/mL

Target CHGA

Note For research use only

Application notes This ELISA kit uses the Sandwich-ELISA

principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Human CHGA. Standards or samples are added to the micro ELISA plate wells and combined with the specific

antibody. Then a biotinylated detection antibody specific for Human CHGA and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Human CHGA, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is

wavelength of 450 nm \pm 2 nm. The OD value is proportional to the concentration of Human CHGA. You can calculate the concentration of Human CHGA in the samples by comparing the OD of the samples to the standard curve.

measured spectrophotometrically at a

Sample Types serum, plasma, Tissue homogenate and Other

biological samples

Sensitivity 25.2 pg/mL
