

Product Datasheet

Human AGT(Angiotensinogen) ELISA Kit (orb1807706)

Description Human AGT(Angiotensinogen) ELISA Kit

Reactivity Human

Range 1.56-100 ng/mL

Target AGT

Note For research use only

Application notes This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Human AGT. Standards or samples are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Human AGT and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Human AGT, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 nm \pm 2 nm. The OD value is proportional to the concentration of Human AGT. You can calculate the concentration of Human AGT in the samples by comparing the OD of the samples to the standard curve.

Sample Types serum, plasma, Tissue homogenate and Other biological samples

Sensitivity 0.59 ng/mL

Expiration Date Please enquire.
