

## **Product Datasheet**

## Mouse FETUA(Fetuin A) ELISA Kit (orb1807951)

**Description** Mouse FETUA(Fetuin A) ELISA Kit

Reactivity Mouse

**Range** 78.12-5000ng/mL

Target FETUA

**Note** For research use only

**Application notes** This ELISA kit uses the Sandwich-ELISA

principle. The micro ELISA plate provided in this

kit has been pre-coated with an antibody specific to Mouse FETUA. Standards or samples are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for

biotinylated detection antibody specific for Mouse FETUA and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Mouse FETUA, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The

optical density (OD) is measured

spectrophotometrically at a wavelength of 450 nm  $\pm$  2 nm. The OD value is proportional to the

concentration of Mouse FETUA. You can calculate the concentration of Mouse FETUA in the samples by comparing the OD of the

samples to the standard curve.

**Sample Types** serum, plasma, Tissue homogenate and Other

biological samples

Sensitivity 46.88 ng/mL

**Expiration Date** Please enquire.
