Application notes ELISA: Peptide ELISA: antibody detection limit dilution

1:32000.WB: Preliminary experiments gave an approx 75kDa band in human duodenum, colon and placenta lysates after 0.3 μ g/ml antibody staining. Please note that currently we cannot find an explanation in the

literature for the band we observe given the calculated size of 108kDa according to NP 068375.3.

The 75kDa band was successfully blocked by

incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other

antibodies/lysates Have any further splice variants/modified forms been reported
