Application notes

ELISA: Peptide ELISA: antibody detection limit dilution 1:64000. WB: Preliminary experiments gave an approx 48kDa band in Human Brain (Hippocampus, Cerebellar Cortex, Cerebellum) and Human Bone Marrow lysates after 0.3 µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 58.6kDa according to NP_060894.2. The 48kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates Have any further splice variants/modified forms been reported
