**Application notes**

ELISA: Peptide ELISA: antibody detection limit dilution 1:4000. WB: Preliminary experiments gave an approx 125kDa band in Human Spleen and Tonsil lysates after 1 µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 78.1kDa according to NP\_073737.1. The 125kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates Have any further splice variants/modified forms been reported
