Application notes

ELISA: Peptide ELISA: antibody detection limit dilution 1:64000. WB: Approx 70kDa band observed in lysates of cell line A431 (calculated MW of 71.1kDa according to NP_078920.2). Recommended concentration: 0.3-1 µg/ml. An additional band of unknown identity was also consistently observed at 45kDa. This band was successfully blocked by incubation with the immunising peptide. We would appreciate any feedback from people in the field - have any such results been reported with other antibodies/lysates Have any further splice variants/modified forms been reported
