Application notes

ELISA: Peptide ELISA: antibody detection limit dilution 1:2000. WB: Preliminary experiments gave an approx 49kDa band in Human Skeletal Muscle lysates after 0.02 µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 26.9kDa according to NP_001019885.1 and NP_034912.3. The 49kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates Have any further splice variants/modified forms been reported
