1:4000.WB: Approx 80kDa band observed in Human Brain

(Hippocampus) lysates (calculated MW of 82.4kDa

according to NP\_938022.2). Recommended concentration: 1-3 µg/ml. An additional band of unknown identity was also

consistently observed at 26kDa. This band was

successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any such results been reported with other

antibodies/lysates Have any further splice variants/modified forms been reported
