

Product Datasheet

Ceruloplasmin antibody (orb21969)

www.biorbyt.com

Descriptionnts. Goat polyclonal antibody to Ceruloplasmin.

Species/Host Goat

Conjugation Unconjugated

Preservatives Delipidated, heat inactivated, lyophilized,

stable whole antiserum No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal goat serum. No foreign

proteins added.

Form/Appearance Delipidated, heat inactivated, lyophilized,

stable whole antiserum No preservative added. Total protein and IgG concentrations in the antiserum are comparable to those of pooled normal goat serum. No foreign

proteins added.

Storage Storage: The lyophilized antiserum is shipped

at ambient temperature and may be stored at +4°C; prolonged storage at or below - 20°C. Dilutions may be prepared by adding phosphate buffered saline (PBS, pH 7.2). Repeated thawing and freezing should be avoided. If a slight precipitation occurs upon

storage, this should be removed by centrifugation. It will not affect the performance of the antiserum. Diluted antiserum should be stored at +4°C, not refrozen, and preferably used the same day

Note For research use only

Clonality Polyclonal

Source Alpha-2 ceruloplasmin is copper containing

alpha-2 glycoprotein with a molecular weight of 160,000. Its mean concentration in plasma of adults is 32 mg/100ml. Elevated levels are observed in pregnant women, in patients with infectious diseases and the nephritic syndrome. More than 90% of the plasma

copper is bound to this protein.

Ceruloplasmin is isolated from pooled human serum by sequential precipitation and purified by ion exchange chromatography and affinity chromatography. Freund's complete adjuvant is used in the first step of

the immunization procedure.

Uniprot ID P00450
