Descriptionnts.

F(ab')2 Rat IgG (H&L) antibody (RPE)

| Description <sup>nts.</sup> | F(ab')2 Rat IgG (H&L) antibody (RPE)   |
|-----------------------------|--|
| Species/Host                | Goat   |
| Reactivity                  | Rat  |
| Conjugation                 | RPE  |
| Tested<br>Applications      | DOT, IF, WB  |
| Immunogen                   | Rat IgG whole molecule   |
| Preservatives               | 0.01% (w/v) Sodium Azide   |
| Form/Appearance             | Lyophilized  |
| Concentration               | 0.5 mg/mL  |
| Storage                     | Store vial at 4° C prior to restoration.<br>Restore with deionized water (or<br>equivalent). This product is stable at 4° C<br>as an undiluted liquid. Dilute only prior to<br>immediate use. Centrifuge product if not<br>completely clear after standing at room<br>temperature. Do not freeze after<br>reconstitution. Store reagent in the dark.<br>Use subdued lighting during handling<br>and incubation of cells prior to analysis.   |
|                             |  |
| Note                        | For research use only  |
| Note<br>Application notes   | For research use only<br>Suitable for immunomicroscopy and flow<br>cytometry or FACS analysis as well as<br>other antibody based fluorescent assays<br>requiring extremely low background<br>levels, absence of F(c) mediated binding,<br>lot-to-lot consistency, high titer and<br>specificity. The maximum amount of<br>reagent required to stain 1 x 10E6 cells<br>in flow cytometry is approximately 1.0 µg<br>of antibody conjugate. Lesser amounts of<br>reagent may be sufficient for staining.<br>Optimal titers for other applications<br>should be determined by the researcher.<br>As a general guideline dilutions of 1:100<br>to 1:250 should be suitable for most<br>applications. |
