Alternative Names RASSF6; Ras association domain-containing protein 6

This gene encodes a member of the Ras-association domain family (RASSF). Members of this family form the core of a highly conserved tumor **Background**

suppressor network, the Salvador-Warts-Hippo (SWH) pathway. The protein encoded by this gene is a Ras effector protein that induces apoptosis. A genomic region containing this gene has been linked to susceptibility to viral bronchiolitis. Alternative splicing results in multiple transcript variants and protein isoforms.
