

## **CENP-A** rabbit pAb

Cat#: orb767387 (Manual)

For research use only. Not intended for diagnostic use.

Product Name CENP-A rabbit pAb

Host species Rabbit

Applications IHC;IF;ELISA

Species Cross-Reactivity Human; Rat; Mouse;

**Recommended dilutions** Immunohistochemistry: 1/100 - 1/300. Immunofluorescence: 1/200 - 1/1000.

ELISA: 1/10000. Not yet tested in other applications.

Immunogen The antiserum was produced against synthesized peptide derived from

human Centromeric Protein A. AA range:1-50

Specificity CENP-A Polyclonal Antibody detects endogenous levels of CENP-A

protein.

Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium

azide..

Storage Store at -20°C. Avoid repeated freeze-thaw cycles.

Protein Name Histone H3-like centromeric protein A

Gene Name CENPA

Cellular localization Nucleus . Chromosome, centromere, kinetochore . Chromosome,

centromere. Localizes exclusively in the kinetochore domain of centromeres. Occupies a compact domain at the inner kinetochore plate stretching across 2

thirds of the length of the constriction

**Purification** The antibody was affinity-purified from rabbit antiserum by affinity-

chromatography using epitope-specific immunogen.

Polyclonal **Clonality** 

Concentration 1 mg/ml

**Observed band** 

1058 **Human Gene ID** 

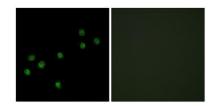

**Human Swiss-Prot Number** P49450

**Alternative Names** CENPA; Histone H3-like centromeric protein A; Centromere autoantigen A;

Centromere protein A; CENP-A

Background

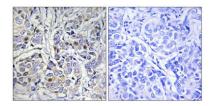

Centromeres are the differentiated chromosomal domains that specify the mitotic behavior of chromosomes. This gene encodes a centromere protein which contains a histone H3 related histone fold domain that is required for targeting to the centromere. Centromere protein A is proposed to be a component of a modified nucleosome or nucleosome-like structure in which it replaces 1 or both copies of conventional histone H3 in the (H3-H4)2 tetrameric core of the nucleosome particle. The protein is a replication-independent histone that is a member of the histone H3 family. Alternative splicing results in multiple transcript variants encoding distinct isoforms.
