

PKN rabbit pAb

Cat#: orb769659 (Manual)

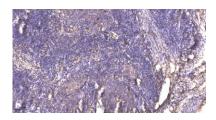

For research use only. Not intended for diagnostic use.

| Product Name | PKN rabbit pAb |
|--------------------------|---|
| Host species | Rabbit |
| Applications | WB;IHC |
| Species Cross-Reactivity | Human;Mouse;Rat |
| Recommended dilutions | WB 1:500-2000;IHC-p 1:50-300 |
| Immunogen | Synthesized peptide derived from the Internal region of human PKN. |
| Specificity | PKN Polyclonal Antibody detects endogenous levels of PKN protein. |
| | |
| Formulation | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide |
| Storage | Store at -20°C. Avoid repeated freeze-thaw cycles. |
| Protein Name | Serine/threonine-protein kinase N1 |
| Gene Name | PKN1 |
| Cellular localization | Cytoplasm . Nucleus . Endosome . Cell membrane ; Peripheral membrane protein . Cleavage furrow . Midbody . Associates with chromatin in a ligand-dependent manner. Localization to endosomes is mediated via its interaction with RHOB. Association to the cell membrane is dependent on Ser-377 phosphorylation. Accumulates during telophase at the cleavage furrow and finally concentrates around the midbody in cytokinesis. |

| Purification | The antibody was affinity-purified from rabbit antiserum by affinity- chromatography using epitope-specific immunogen. |
|-------------------------|---|
| Clonality | Polyclonal |
| Concentration | 1 mg/ml |
| Observed band | 105kD |
| Human Gene ID | 5585 |
| Human Swiss-Prot Number | Q16512 |
| Alternative Names | PKN1; PAK1; PKN; PRK1; PRKCL1; Serine/threonine-protein kinase N1; Protease-activated kinase 1; PAK-1; Protein kinase C-like 1; Protein kinase C-like PKN; Protein kinase PKN-alpha; Protein-kinase C-related kinase 1; Serine-threonine protein |
| Background | protein kinase N1(PKN1) Homo sapiens The protein encoded by this gene belongs to the protein kinase C superfamily. This kinase is activated by Rho family of small G proteins and may mediate the Rho-dependent signaling pathway. This kinase can be activated by phospholipids and by limited proteolysis. The 3-phosphoinositide dependent protein kinase-1 (PDPK I/PDK I) is reported to phosphorylate this kinase, which may mediate insulin signals to the actin cytoskeleton. The proteolytic activation of this kinase by caspase-3 or related proteases during apoptosis suggests its role in signal transduction related to apoptosis. Alternatively spliced transcript variants encoding distinct isoforms have been observed. [provided by RefSeq, Jul 2008], |

Immunohistochemical analysis of paraffin-embedded human cervical carcinoma. 1, Antibody was diluted at 1:200(4° overnight). 2, Tris-EDTA,pH9.0 was used for antigen retrieval. 3,Secondary antibody was diluted at 1:200(room temperature, 45min).
