

Bub1 rabbit pAb

Cat#: orb770232 (Manual)

For research use only. Not intended for diagnostic use.

Product Name Bub1 rabbit pAb

Host species Rabbit

Applications IHC;IF;ELISA

Species Cross-Reactivity Human; Mouse

Recommended dilutions Immunohistochemistry: 1/100 - 1/300. ELISA: 1/10000. Not yet tested in

other applications.

Immunogen The antiserum was produced against synthesized peptide derived from

human BUB1. AA range:251-300

Specificity Bub1 Polyclonal Antibody detects endogenous levels of Bub1 protein.

Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium

azide..

Storage Store at -20°C. Avoid repeated freeze-thaw cycles.

Protein Name Mitotic checkpoint serine/threonine-protein kinase BUB1

Gene Name BUB1

Cellular localization

Nucleus. Chromosome, centromere, kinetochore. Nuclear in interphase cells.

Accumulates gradually during G1 and S phase of the cell cycle, peaks at

G2/M, and drops dramatically after mitosis. Localizes to the outer kinetochore. Kinetochore localization is required for normal mitotic timing and checkpoint response to spindle damage and occurs very early in prophase. AURKB, KNL1 and INCENP are required for kinetochore

localization (By similarity). .

Explore. Bioreagents.

Purification The antibody was affinity-purified from rabbit antiserum by affinity-

epitope-specific immunogen. chromatography using

Polyclonal **Clonality**

Concentration 1 mg/ml

Observed band

699 **Human Gene ID**

Human Swiss-Prot Number O43683

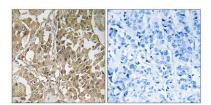

BUB1; BUB1L; Mitotic checkpoint serine/threonine-protein kinase BUB1; **Alternative Names**

hBUB1; BUB1A

Background

This gene encodes a serine/threonine-protein kinase that play a central role in mitosis. The encoded protein functions in part by phosphorylating members of the mitotic checkpoint complex and activating the spindle checkpoint. This protein also plays a role in inhibiting the activation of the anaphase promoting complex/cyclosome. This protein may also function in the DNA damage response. Mutations in this gene have been associated with

aneuploidy and several forms of cancer. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Jul 2013],

Immunohistochemistry analysis of paraffin-embedded human breast carcinoma tissue, using BUB1 Antibody. The picture on the right is blocked with the synthesized peptide.
