

Product Datasheet

Vazyme - Lysis Buffer Pro (DMA5101-C1)

Catalog Number	DMA5101-C1
Category	Tools
Description	<p>VAMNE Magnetic Stool/Soil DNA Extraction Kit is applicable for DNA extraction from soil, feces, intestinal contents, fermentation products, water filter membranes and various other samples. The kit uses a combination of chemical methods and mechanical methods, which can efficiently lyse bacteria and fungi with thicker cell walls, and combines special humic acid removal technology to effectively remove humic acid and other inhibitory factors from the sample. The high-affinity magnetic beads used in this kit can adsorb nucleic acids through hydrogen bonds and electrostatic interactions in high-salt buffer solutions. After rinse to remove excess humic acid, proteins, salts and other impurities, the magnetic beads release nucleic acids under the action of low-salt elution solution, thus achieving the purpose of rapid separation and purification of nucleic acids. This kit can quickly extract high-yield, high-purity DNA, and the purified DNA can be directly used for PCR, qPCR, next-generation sequencing, and other experiments.</p>
Usage Notes	Restricted to UK and Ireland's customers ONLY
Storage	BOX 1: RNase A, PI Buffer. Store at 2 ~ 8 ° C and ship on ice. BOX 2: Other Components. Store at 15 ~ 25 ° C and ship at room temperature.
Note	For research use only
Expiration Date	12 months from date of receipt.
