Vazyme - RoomTemp Sample Lysis Kit (P073-02)

Catalog Number	P073-02
Category	Tools
Description	<p>RoomTemp Sample Lysis Kit is a simple and rapid blood room temperature lysis kit. This kit contains two components, Lysis Buffer and Stabilizing Buffer. Lysis Buffer contains special components that can rapidly destroy cell membrane proteins and membrane structures, which can fully release genomic DNA in cells. Stabilizing Buffer contains protective proteins and stabilizing factors, which can eliminate the inhibitory effect of inhibitors in lysed samples on downstream qPCR and PCR. And the DNA solution can be stored stably for a long time. Applicable blood sample types include fresh blood, frozen blood and conventional anticoagulant blood (EDTA, citrate, heparin sodium, etc.). Genomic DNA can be released from whole blood samples after 3 min lysis at room temperature. The DNA solution can be directly used as templates for SNP detection by Taqman probe method, quantification by qPCR probe method, PCR amplification, etc. It can achieve the same effect as traditional genome extraction methods without complicated extraction operations. In addition to blood samples, this kit is also compatible with FTA blood cards, oral swabs, plant tissues and other samples.</p>
Application notes	<p>Simple operation: 3 minutes at room temperature, no need for complex template extraction. High lysis efficiency: The lysis reagent has the same effect as traditional kits for extracting genome. Wide range of applications: Compatible with Taqman probe method for SNP detection, qPCR probe method quantification, PCR amplification and other sample compatibility: lysis of fresh blood, frozen blood, conventional anticoagulant blood, tissue homogenate, oral swabs, Various samples such as FTA card.</p>
Usage Notes	Restricted to UK and Ireland's customers ONLY
Storage	Store at 2 ~ 8°C. Adjust the shipping method according to different destinations.
Background	Only available for the UK and Republic of Ireland
Note	For research use only
