

Product Datasheet

Vazyme - ChamQ SYBR qPCR Master Mix (High ROX Premixed) (Q341-02)

Catalog Number	Q341-02
Category	Tools
Description	<p>ChamQ SYBR qPCR Master Mix (High ROX Premixed) is a special premix for qPCR assays based on SYBR Green I fluorescence method. The core component, Champagne Taq DNA Polymerase, is a novel antibody-modified hot-start DNA polymerase with high specificity and detection sensitivity. Equipped with the optimized buffer for qPCR and specificity-promoting factors, it is very suitable for highly specific and sensitive qPCR assays. This product is a 2 × premix reagent that contains SYBR Green I at an optimal concentration for qPCR. It can obtain a good standard curve in a wide quantitative range, and accurately quantify target genes with good repeatability and high reliability.</p>
Application notes	<p>High efficiency hot-start polymerase: Novel antibody modified hot-start DNA polymerase with strong amplification performance and high sensitivity. High specificity: The specificity-enhancing factor Exactor inhibits non-specific amplification and primer dimerization to a large extent. High concentration ROX is premixed in Biorbyt #Q331. It is applicable for Step One, Step One Plus, ABI 5700/7300/7700/7900/7900HT and other qPCR instruments.</p>
Usage Notes	Restricted to UK and Ireland's customers ONLY
Storage	<p>Store at -30 ~ -15 °C and protect from light. Transport at ≤0 °C . After thawing, the Master mix can be stored stably for 6 months at 2 ~ 8 °C and protected from light. ▲ If white precipitate is found in the Master Mix after thawing, place it at room temperature for a short while and invert the tube upside down several times to dissolve the precipitate. Please make sure the precipitates have fully dissolved and mix thoroughly before use.</p>
Background	Only available for the UK and Republic of Ireland
Note	For research use only
