

Product Datasheet

Rat Tumor Necrosis Factor Receptor Superfamily, Member 10A (TNFRSF10A) ELISA Kit (orb1146955)

Description

The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Tumor Necrosis Factor Receptor Superfamily, Member 10A(TNFRSF10A). Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Tumor Necrosis Factor Receptor Superfamily, Member 10A(TNFRSF10A). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Tumor Necrosis Factor Receptor Superfamily, Member 10A(TNFRSF10A), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of $450\text{nm} \pm 10\text{nm}$. The concentration of Tumor Necrosis Factor Receptor Superfamily, Member 10A(TNFRSF10A) in the samples is then determined by comparing the OD of the samples to the standard curve.

Reactivity

Rat

Range

0.16-10 ng/mL

Concentration

10 ng/mL

Note

For research use only

Application notes

standard: 10 ng/mL. Test principle: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Rat TNFRSF10A. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Rat TNFRSF10A. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Rat TNFRSF10A, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of $450\text{nm} \pm 10\text{nm}$. The concentration of Rat TNFRSF10A in the samples is then determined by comparing the OD of the samples to the standard curve

Sample Types

Tissue homogenates, cell Lysates and other biological fluids.

Assay Time

3.5h

Sensitivity

0.057 ng/mL

Expiration Date

Please enquire.
