## Anti-FAA/FAH Antibody (orb1152350)

Catalog Number orb1152350

**Description** Anti-FAA/FAH Antibody. Tested in ELISA, Flow Cytometry, IHC, WB applications.

This antibody reacts with Human, Mouse, Rat.

Species/Host Rabbit

**Reactivity** Human, Mouse, Rat

**Conjugation** Unconjugated

**Tested Applications** ELISA, FC, IHC, WB

**Immunogen** E.coli-derived human FAA/FAH recombinant protein (Position: M1-P342).

Form/Appearance Lyophilized

**Concentration** Adding 0.2 ml of distilled water will yield a concentration of 500 μg/ml.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -

20°C in small aliquots to prevent freeze-thaw cycles.

**Note** For research use only

**Application notes** Western blot, 0.25-0.5 μg/ml, Human, Mouse, Rat

Immunohistochemistry(Paraffin-embedded Section), 2-5  $\mu$ g/ml, Human, Mouse, Rat Flow Cytometry (Fixed), 1-3  $\mu$ g/1x106 cells, Human ELISA, 0.1-0.5  $\mu$ g/ml, -.

Adding 0.2 ml of distilled water will yield a concentration of 500 µg/ml

**Isotype** Rabbit IgG

**Clonality** Polyclonal

Antibody Type Primary Antibody

**MW** 41 kDa

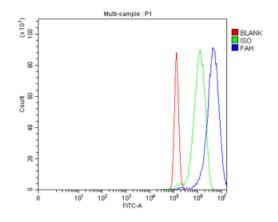

### **Uniprot ID**

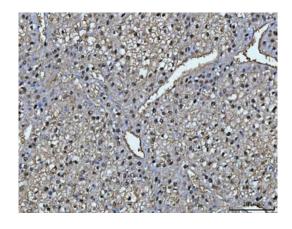

#### P16930

### **Expiration Date**

12 months from date of receipt.

Flow Cytometry analysis of PC-3 cells using anti-FAA/FAH antibody. Overlay histogram showing PC-3 cells (Blue line). To facilitate intracellular staining, cells were fixed with 4% paraformaldehyde and permeabilized with permeabilization buffer. The cells were blocked with 10% normal goat serum. And then incubated with rabbit anti-FAA/FAH Antibody (1  $\mu g/1x10^{\circ}6$  cells) for 30 min at 20°C. DyLight® 488 conjugated goat anti-rabbit IgG (5-10  $\mu g/1x10^{\circ}6$  cells) was used as secondary antibody for 30 minutes at 20°C. Isotype control antibody (Green line) was rabbit IgG (1  $\mu g/1x10^{\circ}6$ ) used under the same conditions. Unlabelled sample without incubation with primary antibody and secondary antibody (Red line) was used as a blank control.

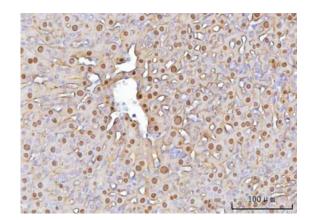

IHC analysis of FAA/FAH using anti-FAA/FAH antibody. FAA/FAH was detected in a paraffin-embedded section of human liver cancer tissue. Heat mediated antigen retrieval was performed in EDTA buffer (pH8.0, epitope retrieval solution). The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 2  $\mu$ g/ml rabbit anti-FAA/FAH Antibody overnight at 4°C. Peroxidase Conjugated Goat Anti-rabbit IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using HRP Conjugated Rabbit IgG Super Vision Assay Kit with DAB as the chromogen.

Western blot analysis of FAA/FAH using anti-FAA/FAH antibody. Electrophoresis was performed on a 5-20% SDS-PAGE gel at 70V (Stacking gel) / 90V (Resolving gel) for 2-3 hours. The sample well of each lane was loaded with 30 ug of sample under reducing conditions. Lane 1: human HCCP tissue lysates, Lane 2: human HepG2 whole cell lysates, Lane 3: rat liver tissue lysates, Lane 4: rat kidney tissue lysates, Lane 5: mouse liver tissue lysates, Lane 6: mouse kidney tissue lysates. After electrophoresis, proteins were transferred to a nitrocellulose membrane at 150 mA for 50-90 minutes. Blocked the membrane with 5% non-fat milk/TBS for 1.5 hour at RT. The membrane was incubated with rabbit anti-FAA/FAH antigen affinity purified polyclonal antibody at 0.5 µg/mL overnight at 4°C, then washed with TBS-0.1% Tween 3 times with 5 minutes each and probed with a goat anti-rabbit IgG-HRP secondary antibody at a dilution of 1:5000 for 1.5 hour at RT. The signal is developed using an Enhanced Chemiluminescent detection (ECL) kit with Tanon 5200 system. A specific band was detected for FAA/FAH at approximately 41 kDa. The expected band size for FAA/FAH is at 46 kDa.
