

Product Datasheet

Recombinant IL-8/CXCL8(8-79aa), Human (orb1494812)

Description	Interleukin-8 is one of the first discovered chemokines, and belongs to the CXCL family, in which the first two conserved cysteines are separated by one residue. In vivo, IL-8 exists in two forms: 77 a.a. produced by endothelial cells, and the more active 72 a.a. produced by monocytes. The receptors of IL-8 are the seven-helical G-protein coupled receptors CXCR1 and CXCR2, exclusively expressed on neutrophils. The functions of IL-8 are to induce rapid changes in cellular shape, activate the integrins, and release the granule contents of neutrophils. Thus, IL-8 can enhance the antimicrobial actions of defense cells. Recombinant human IL Interleukin-8/CXCL8 (rhIL-8) produced in E.coli is a single non-glycosylated polypeptide chain containing 72 amino acids. A fully biologically active molecule, rhIL-8 has a molecular mass of 8.4 kDa analyzed by reducing SDS-PAGE and is obtained by proprietary chromatographic techniques at GenScript.
Endotoxins	< 0.2 EU/μg, determined by LAL method.
Preservatives	Lyophilized after extensive dialysis against PBS.
Form/Appearance	Lyophilized after extensive dialysis against PBS.
Storage	Lyophilized recombinant human Interleukin-8°CXCL8 (rhIL-8) remains stable up to 6 months at -80°C from date of receipt. Upon reconstitution, rhIL-8 remains stable up to 2 weeks at 4°C or up to 3 months at -20°C.
Note	For research use only
Application notes	Reconstituted in ddH2O at 100 μg/mL.
Protein Sequence	SAKELRCQ CIKTYSKPFH PKFIKELRVI ESGPHCANTE IIVKLSDGRE LCLDPKENWV QRVVEKFLKR AENS
Purity	> 95% as analyzed by SDS-PAGE and HPLC.
Source	Escherichia coli.
MW	8.4 kDa, observed by reducing SDS-PAGE.
