qPCR GreenMaster lowROX (orb1733681)

Catalog Number	orb1733681
Category	Small Molecules
Description	<p>qPCR SybrMaster lowROX is designed for quantitative real-time analysis of DNA samples. The mix contains all reagents required for qPCR (except template and primers) in a premixed 2x concentrated ready-to-use solution. It is recommended for routine PCR applications, high throughput PCR or genotyping and provides an improved specificity and sensitivity when amplifying low-copy-number targets or working with complex backgrounds. The mix is based on an optimized hot-start polymerase. Its activity is blocked by antibody at ambient temperature and switched on automatically at the onset of the initial denaturation. The thermal activation prevents the extension of nonspecifically annealed primers and primer-dimer formation at low temperatures during PCR setup. The fluorescent DNA stain SYBR Green intercalates into the amplification product during the PCR process and allows the direct quantification of target DNA without the need to synthesize sequence-specific labeled probes (i.g. TaqMan Probes). The reaction chemistry of the kit is optimized for instruments that are compatible with the evaluation of a low ROX reference signal.</p>
Form/Appearance	liquid
Concentration	2x conc
Application notes	Spectroscopic Properties: λ_{exc} 494 nm (bound to DNA), λ_{em} 521 nm, (bound to DNA).
Storage	store at -20 °C. avoid freeze/thaw cycles, store dark. Storage at 4 °C for up to 3 months possible
Note	For research use only
