

Product Datasheet

Rotavirus (RV) VP6 Protein (Control) (orb1921789)

Catalog Number	orb1921789
Category	Proteins
Description	<p>Rotavirus, member of Reoviridae family, is a non-enveloped double-stranded RNA (dsRNA) virus whose architecture is that three concentric capsids surround a genome of 11 segments of dsRNA. The RNA encodes six structural proteins (VP1, VP2, VP3, VP4, VP6 and VP7) and six non-structural proteins (NSP1, NSP2, NSP3, NSP4, NSP5 and NSP6), both determining the host specificity, cell entry and enzymatic functions and comprising epitopes that generate immune responses. The non-structural proteins are associated with genome replication. Two rotavirus vaccines are broadly used worldwide: the RV5 vaccine and the RV1 vaccine. RV5 vaccine is a live attenuated pentavalent vaccine, while the RV1 vaccine is a live attenuated human monovalent virus vaccine.</p>
Form/Appearance	Purified, Liquid
Buffer/Preservatives	50mM Tris, 500mM N/ACl, 2% glycerin, pH8.0
Purity	>95% pure (SDS-PAGE)
Purification	Ni+ Chromatography
MW	87 kDa
Tested applications	CLIA
Expression System	E. coli
Matched Pairs	Control: orb1921789; Capture: orb1921788; Detection: orb1921787;
Source	Human rotavirus (isolate CHN/TB-Chen/1996/G2P)
Sample Types	Test sample type: Stool. Test sample source: Human
