Formalin-fixed and paraffin-embedded human brain tissue reacted with PKC gamma antibody (C-term), which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.

Western blot analysis of anti-PKC gamma C-term Pab in mouse brain lysate. PKC gamma (arrow) was detected using purified Pab. Secondary HRP-anti-rabbit was used for signal visualization with chemiluminescence.
