| <b>Catalog Number</b> | orb1943052                                                                                                                                                                                                                                          |
| <b>Category</b>       | Small Molecules                                                                                                                                                                                                                                     |
| <b>Description</b>    | N-4'-(p-Trifluoromethylphenyl)butyl-DAB (compound 5g) acts as an agonist for lysosomal acid $\alpha$ -glucosidase (GAA), dose-dependently enhancing intracellular GAA activities in Pompe disease patient fibroblasts harboring the M519V mutation. |
| <b>Target</b>         | Others                                                                                                                                                                                                                                              |
| <b>Storage</b>        | -20°C                                                                                                                                                                                                                                               |
| <b>Note</b>           | For research use only                                                                                                                                                                                                                               |
