

## Product Datasheet

# Rabbit Bovine IgM (Fc specific), conjugated with FITC Antibody (orb20670)

Catalog Number	orb20670
Category	Antibodies
Description	Fluorescein isothiocyanate-conjugated IgG fraction of polyclonal rabbit antiserum to Bovine IgM, Fc specific. In immunocytochemical and immunohistochemical staining for the detection of IgM at the cellular and subcellular level by staining of appropriately treated cell and tissue substrates; to demonstrate circulating IgM antibodies in serodiagnostic microbiology and autoimmune diseases; to identify a specific antigen using a reference antibody of bovine origin known to be of the IgM isotype in the middle layer of the indirect test procedure. This immunoconjugate is not pre-diluted. The optimum working dilution of each conjugate should be established by titration before being used. Excess labelled antibody must be avoided because it may cause high unspecific background staining and interfere with the specific signal. Working dilutions are usually between 1:20 and 1:80.
Clonality	Polyclonal
Species/Host	Rabbit
Conjugation	FITC
Reactivity	Bovine
Form/Appearance	Fluorescein-coupled purified hyperimmune rabbit IgG lyophilized from a solution in phosphate buffered saline (PBS, pH 7.2). No preservative added, as it may interfere with the antibody activity.
RRID	AB_10931198
Antibody Type	Secondary Antibody

**Source**

Purified normal IgM isolated from pooled bovine serum. Freund's complete adjuvant is used in the first step of the immunization procedure.

**Storage**

The lyophilized conjugate is shipped at ambient temperature and may be stored at +4°C; prolonged storage at or below -20°C. Prior to use, an aliquot is thawed slowly in the dark at ambient temperature, spun down again and used to prepare working dilutions by adding sterile phosphate buffered saline (PBS, pH 7.2). Repeated thawing and freezing should be avoided. Working dilutions should be stored at +4°C, not refrozen, and preferably used the same day. If a slight precipitation occurs upon storage, this should be removed by centrifugation. It will not affect the performance of the immunoconjugate.

**Note**

For research use only
