

Product Datasheet

Anti-Apolipoprotein E Antibody (orb213571)

Catalog Number orb213571

Description Rabbit polyclonal antibody to Apolipoprotein E

Species/Host Rabbit

Reactivity Human, Mouse, Primate, Rat

Conjugation Unconjugated

Tested Applications IF, IH, WB

Immunogen KLH-conjugated synthetic peptide encompassing a sequence within the center

region of human Apolipoprotein E. The exact sequence is proprietary.

Target APOE

Preservatives Liquid in 0.42% Potassium phosphate, 0.87% Sodium chloride, pH 7.3, 30%

glycerol, and 0.01% sodium azide.

Form/Appearance Liquid in 0.42% Potassium phosphate, 0.87% Sodium chloride, pH 7.3, 30%

glycerol, and 0.01% sodium azide.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -

20°C in small aliquots to prevent freeze-thaw cycles.

Note For research use only

Clonality Polyclonal

Antibody Type Primary Antibody

Source Rabbit

Uniprot ID P02649, P02650, P08226

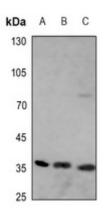

Entrez 11816, 25728, 348

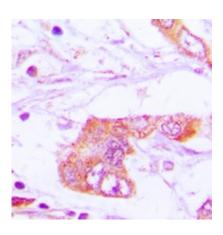

Dilution Range WB: 1-500-1-1000, IHC-P: 1-100-1-200

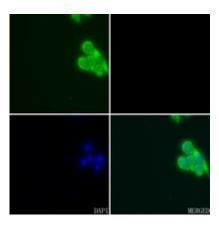

Expiration Date 12 months from date of receipt.

Western blot analysis of Apolipoprotein E expression in A375 (A), U2OS (B), DLD (C) whole cell lysates. (Predicted band size: 36 kD; Observed band size: 36 kD)

Immunohistochemical analysis of Apolipoprotein E staining in human lung cancer formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Immunofluorescent analysis of Apolipoprotein E staining in C6 cells. Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were probed with the primary antibody in 3% BSA-PBS and incubated overnight at 4 °C in a hidified chamber. Cells were washed with PBST and incubated with a AF488-conjugated secondary antibody (green) in PBS at room temperature in the dark. Phalloidin - AF594 was used to stain Actin filaments (red). DAPI was used to stain the cell nuclei (blue).
