## qPCR ProbesMaster lowROX (orb533371)

Catalog Number orb533371

**Category** Tools

**Description** qPCR ProbesMaster lowROX is designed for quantitative real-time analysis of

DNA samples using DNA probe based detection. The master mix is

recommended for use with Dual Labeled Fluorescent Probes, e.g. TaqMan, Molecular Beacons or FRET probes. It provides an easy-to-handle and powerful tool for quantification of sample DNA in a broad dynamic range of up to 6 orders of magnitude with exceptional sensitivity and precision. The mix contains all reagents required for qPCR (except template, primer and labeled fluorescent probe) in a premixed 2x concentrated ready-to-use solution. The high specificity and sensitivity of the mix based on an optimized hot-start polymerase. Its activity is blocked by antibody at ambient temperature and switched on automatically at the onset of the initial denaturation. The thermal activation prevents the extension of nonspecifically annealed primers and primer-dimer formation at low temperatures during PCR setup. The reaction chemistry of the kit is optimized for instruments that are compatible with the evaluation of a low ROX reference signal.

Form/Appearance liquid

**Concentration** 2x conc

**Storage** store at -20 °C

**Note** For research use only

**Expiration Date** 6 months from date of receipt.
