

Product Datasheet

Anti-MCU Antibody (orb669189)

Description Anti-MCU Antibody. Tested in ELISA, Flow Cytometry, IHC, WB applications. This

antibody reacts with Human, Monkey, Mouse, Rat.

Species/Host Rabbit

Reactivity Human, Monkey, Mouse, Rat

Conjugation Unconjugated

Tested Applications ELISA, FC, IHC, WB

Immunogen E.coli-derived human MCU recombinant protein (Position: V51-D351).

Form/Appearance Lyophilized

Concentration Adding 0.2 ml of distilled water will yield a concentration of 500 μg/ml.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -

20°C in small aliquots to prevent freeze-thaw cycles.

Note For research use only

Application notes Western blot, 0.25-0.5µg/ml, Human, Mouse, Rat, Monkey

Immunohistochemistry (Paraffin-embedded Section), 2-5µg/ml, Human, Mouse, Rat Flow Cytometry (Fixed), 1-3µg/1x106 cells, Human ELISA, 0.1-0.5µg/ml, -.

Add 0.2ml of distilled water will yield a concentration of 500ug/ml

Isotype Rabbit IgG

Clonality Polyclonal

Antibody Type Primary Antibody

MW 34 kDa

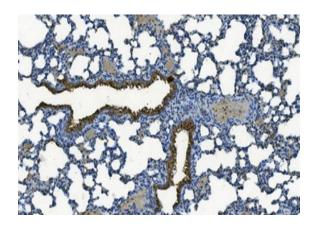

Uniprot ID Q8NE86

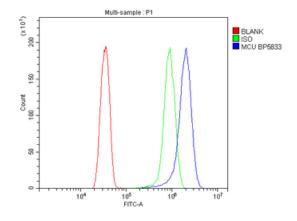

Expiration Date

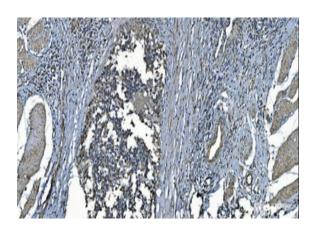

12 months from date of receipt.

IHC analysis of MCU using anti-MCU antibody. MCU was detected in paraffin-embedded section of rat lung tissue. Heat mediated antigen retrieval was performed in EDTA buffer (pH8.0, epitope retrieval solution). The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 2 μ g/ml rabbit anti-MCU Antibody overnight at 4°C. Biotinylated goat anti-rabbit IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using Strepavidin-Biotin-Complex (SABC) with DAB as the chromogen.

Flow Cytometry analysis of HELA cells using anti-MCU antibody. Overlay histogram showing HELA cells (Blue line). To facilitate intracellular staining, cells were fixed with 4% paraformaldehyde and permeabilized with permeabilization buffer. The cells were blocked with 10% normal goat serum. And then incubated with rabbit anti-MCU Antibody (1 $\mu g/1x10^6$ cells) for 30 min at 20°C. DyLight®488 conjugated goat anti-rabbit IgG (5-10 $\mu g/1x10^6$ cells) was used as secondary antibody for 30 minutes at 20°C. Isotype control antibody (Green line) was rabbit IgG (1 $\mu g/1x10^6$) used under the same conditions. Unlabelled sample without incubation with primary antibody and secondary antibody (Red line) was used as a blank control.

IHC analysis of MCU using anti-MCU antibody. MCU was detected in paraffin-embedded section of human bladder cancer tissue. Heat mediated antigen retrieval was performed in EDTA buffer (pH8.0, epitope retrieval solution). The tissue section was blocked with 10% goat serum. The tissue section was then incubated with 2 μ g/ml rabbit anti-MCU Antibody overnight at 4°C. Biotinylated goat anti-rabbit IgG was used as secondary antibody and incubated for 30 minutes at 37°C. The tissue section was developed using Strepavidin-Biotin-Complex (SABC) with DAB as the chromogen.

Western blot analysis of MCU using anti-MCU antibody. Electrophoresis was performed on a 5-20% SDS-PAGE gel at 70V (Stacking gel) / 90V (Resolving gel) for 2-3 hours. The sample well of each lane was loaded with 50 ug of sample under reducing conditions. Lane 1: human HELA whole cell lysates, Lane 2: human A549 whole cell lysates, Lane 3: human PANC-1 whole cell lysates, Lane 4: monkey COS-7 whole cell lysates, Lane 5: human HL-60 whole cell lysates, Lane 6: human HEPG2 whole cell lysates, Lane 7: human Jurkat whole cell lysates, Lane 8: rat brain tissue lysates, Lane 9: rat kidney tissue lysates, Lane 10: rat heart tissue lysates, Lane 11: rat PC-12 whole cell lysates, Lane 12: mouse brain tissue lysates, Lane 13: mouse kidney tissue lysates, Lane 14: mouse heart tissue lysates, Lane 15: mouse NIH/3T3 whole cell lysates. After Electrophoresis, proteins were transferred to a Nitrocellulose membrane at 150 mA for 50-90 minutes. Blocked the membrane with 5% Non-fat Milk/ TBS for 1.5 hour at RT. The membrane was incubated with rabbit anti-MCU antigen affinity purified polyclonal antibody at 0.5 µg/mL overnight at 4°C, then washed with TBS-0.1% Tween 3 times with 5 minutes each and probed with a goat anti-rabbit IgG-HRP secondary antibody at a dilution of 1:5000 for 1.5 hour at RT. The signal is developed using an Enhanced Chemiluminescent detection (ECL) kit with Tanon 5200 system. A specific band was detected for MCU at approximately 34 KD. The expected band size for MCU is at 34 KD.
