<b>Concentration</b>	2000 ng/mL
<b>Tested applications</b>	ELISA
<b>Application notes</b>	<p>This assay employs the competitive inhibition enzyme immunoassay technique. The microtiter plate provided in this kit has been pre-coated with KYNA. Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to KYNA. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm <math>\pm</math> 10nm. The concentration of KYNA in the samples is then determined by comparing the OD of the samples to the standard curve.</p>
